McCracken Co. Suspected ODs CY 22-24

ODMAP is a HIDTA software that provides near real-time suspected overdose data from EMS and law enforcement. PDHD uses this information for hotspot analysis and targeted outreach.

**Naloxone (narcan)** is an opioid antagonist, used to reverse an opioid overdose. This medication, fentanyl and xylazine test strips, and educational material are distributed during outreach events.

Signs/symptoms of an opioid overdose:

- Pin Point Pupils
- Blue Lips and nails
- Shallow/absent breathing
- Cold/Clammy Skin
- Unresponsive
