

# OPIOID OVERDOSE FACTS

**THE RISK OF OVERDOSE INCREASES IF YOU**

- (a) have overdosed within the past year;
- (b) use benzodiazepine, alcohol, stimulants, and opioids together;
- (c) use fentanyl; or
- (d) your tolerance has decreased from a period of abstinence (non-use).

**NALOXONE (NARCAN, KLOXXADO) IS THE ONLY THING THAT REVERSES AN OPIOID OVERDOSE**
